GRADE 9 AGRICULTURE
FULL-YEAR SCHEME OF WORK

Teacher-prepared planning document aligned to the KICD Grade 9 Agriculture Curriculum Design

Planning note: The KICD design lists 120 suggested lessons across 10 sub-strands. This scheme schedules 40 lessons per term (4 lessons per week for 10 teaching weeks). Adjust the pacing to the school calendar, learner needs, local resources and assessment requirements. The term split is a planning proposal, not a KICD-prescribed term allocation.

School: _____	Teacher: _____	TSC No.: _____	Year: _____
Learning Area: Agriculture	Grade: 9	Term: All Terms	Lessons: 120

TERM 1

WK	LSN	STRAND	SUB-STRAND	LESSON LEARNING OUTCOMES	LEARNING EXPERIENCES	KEY INQUIRY QUESTIONS	LEARNING RESOURCES	ASSESSMENT METHODS	REFLECTION
1	1	1.0 Conservation of Resources	1.1 Conserving Animal Feed: Hay	At the end of the lesson, the learner should be able to: Knowledge: Identify suitable materials and conditions for making hay. Skills: Demonstrate safe preparation and storage of hay. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.	The learner is guided to observe samples, pictures or a demonstration; identify key features; discuss prior knowledge in pairs; and record findings. The learner is guided to identify locally available fodder and materials; observe and discuss suitable grass; sequence hay-making stages; practise safe drying, turning and storage using available materials.	Which conditions help preserve fodder as hay?	Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.	Observation checklist, oral questions, learner records, practical task and peer/self-assessment.	_____
1	2	1.0 Conservation of Resources	1.1 Conserving Animal Feed: Hay	At the end of the lesson, the learner should be able to: Knowledge: Describe the stages involved in making hay. Skills: Demonstrate safe preparation and storage of hay. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.	The learner is guided to read relevant instructions, interpret diagrams and compare examples; work in groups to classify information; and present conclusions. The learner is guided to identify locally available fodder and materials; observe and discuss suitable grass; sequence hay-making stages; practise safe drying, turning and storage using available materials.	Which conditions help preserve fodder as hay?	Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.	Observation checklist, oral questions, learner records, practical task and peer/self-assessment.	_____
1	3	1.0 Conservation of Resources	1.1 Conserving Animal Feed: Hay	At the end of the lesson, the learner should be able to: Knowledge: Demonstrate safe preparation and storage of hay. Skills: Demonstrate safe preparation and storage of hay. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.	The learner is guided to investigate the process using locally available materials; sequence the steps; practise the relevant skill safely; and record observations. The learner is guided to identify locally available fodder and materials; observe and discuss suitable grass; sequence hay-making stages; practise safe drying, turning and storage using available	Which conditions help preserve fodder as hay?	Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.	Observation checklist, oral questions, learner records, practical task and peer/self-assessment.	_____

					materials.				
1	4	1.0 Conservation of Resources	1.1 Conserving Animal Feed: Hay	At the end of the lesson, the learner should be able to: Knowledge: Identify suitable materials and conditions for making hay. Skills: Demonstrate safe preparation and storage of hay. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.	The learner is guided to apply the skill in a practical task; evaluate the outcome against agreed criteria; give peer feedback; and suggest improvements. The learner is guided to identify locally available fodder and materials; observe and discuss suitable grass; sequence hay-making stages; practise safe drying, turning and storage using available materials.	Which conditions help preserve fodder as hay?	Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.	Observation checklist, oral questions, learner records, practical task and peer/self-assessment.	_____

Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.	observations. The learner is guided to assess a suitable garden site; identify organic inputs; prepare planting beds or containers; practise composting, mulching and appropriate planting; maintain a garden record.		teacher-prepared worksheets.		
10	3	2.0 Food Production Processes	2.1 Organic Gardening	At the end of the lesson, the learner should be able to: Knowledge: Identify requirements for establishing an organic garden. Skills: Establish or plan an organic garden using locally available resources. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.	The learner is guided to apply the skill in a practical task; evaluate the outcome against agreed criteria; give peer feedback; and suggest improvements. The learner is guided to assess a suitable garden site; identify organic inputs; prepare planting beds or containers; practise composting, mulching and appropriate planting; maintain a garden record.	How can a garden produce food while caring for the environment?	Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.	Observation checklist, oral questions, learner records, practical task and peer/self-assessment.	_____
10	4	2.0 Food Production Processes	2.1 Organic Gardening	At the end of the lesson, the learner should be able to: Knowledge: Describe organic methods of improving soil fertility and managing pests. Skills: Establish or plan an organic garden using locally available resources. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.	The learner is guided to observe samples, pictures or a demonstration; identify key features; discuss prior knowledge in pairs; and record findings. The learner is guided to assess a suitable garden site; identify organic inputs; prepare planting beds or containers; practise composting, mulching and appropriate planting; maintain a garden record.	How can a garden produce food while caring for the environment?	Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.	Observation checklist, oral questions, learner records, practical task and peer/self-assessment.	_____

9	2	4.0 Production Techniques	4.2 Homemade Sun Dryer	At the end of the lesson, the learner should be able to: Knowledge: Identify materials and design features of a simple sun dryer. Skills: Construct or model a simple sun dryer and evaluate its use. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.	The learner is guided to investigate the process using locally available materials; sequence the steps; practise the relevant skill safely; and record observations. The learner is guided to investigate traditional drying methods; sketch and label a sun-dryer design; select safe locally available materials; construct a model or prototype in groups; test and record observations.	How can a sun dryer help preserve farm produce?	Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.	Observation checklist, oral questions, learner records, practical task and peer/self-assessment.	_____
9	3	4.0 Production Techniques	4.2 Homemade Sun Dryer	At the end of the lesson, the learner should be able to: Knowledge: Explain how a sun dryer reduces moisture in produce. Skills: Construct or model a simple sun dryer and evaluate its use. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.	The learner is guided to apply the skill in a practical task; evaluate the outcome against agreed criteria; give peer feedback; and suggest improvements. The learner is guided to investigate traditional drying methods; sketch and label a sun-dryer design; select safe locally available materials; construct a model or prototype in groups; test and record observations.	How can a sun dryer help preserve farm produce?	Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.	Observation checklist, oral questions, learner records, practical task and peer/self-assessment.	_____
9	4	4.0 Production Techniques	4.2 Homemade Sun Dryer	At the end of the lesson, the learner should be able to: Knowledge: Construct or model a simple sun dryer and evaluate its use. Skills: Construct or model a simple sun dryer and evaluate its use. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.	The learner is guided to observe samples, pictures or a demonstration; identify key features; discuss prior knowledge in pairs; and record findings. The learner is guided to investigate traditional drying methods; sketch and label a sun-dryer design; select safe locally available materials; construct a model or prototype in groups; test and record observations.	How can a sun dryer help preserve farm produce?	Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.	Observation checklist, oral questions, learner records, practical task and peer/self-assessment.	_____
10	1	4.0 Production Techniques	4.2 Homemade Sun Dryer	At the end of the lesson, the learner should be able to: Knowledge: Identify materials and design features of a simple sun dryer. Skills: Construct or model a simple sun dryer and evaluate its use.	The learner is guided to read relevant instructions, interpret diagrams and compare examples; work in groups to classify information; and present conclusions. The learner is guided to investigate traditional drying	How can a sun dryer help preserve farm produce? Teacher's reflection on the term: _____

HOD/Coordinator: _____ Date: _____

KICD curriculum coverage reference

Official source: Kenya Institute of Curriculum Development, Grade 9 Agriculture Curriculum Design (April 2024), Summary of Strands and Sub-strands. The official summary specifies: Conserving Animal Feed: Hay (12); Conserving Leftover Food (11); Integrated Farming (12); Organic Gardening (14); Storage of Crop Produce (10); Cooking: Using Flour Mixtures (14); Cleaning Waste Disposal Facilities (9); Disinfecting Clothings and Household Articles (12); Grafting in Plants (13); Homemade Sun Dryer (13), totalling 120 suggested lessons.
