GRADE 9 AGRICULTURE – LESSON PLAN 1

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 2	WEEK: 1	LESSON: 1	TIME: 40 minutes | ROLL: _____

Strand: 1.0 Conservation of Resources

Sub-strand: 1.1 Conserving Animal Feed: Hay

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Identify suitable materials and conditions for making hay. Skills: Demonstrate safe preparation and storage of hay. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: Which conditions help preserve fodder as hay?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “1.1 Conserving Animal Feed: Hay” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: Which conditions help preserve fodder as hay?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to observe samples, pictures or a demonstration; identify key features; discuss prior knowledge in pairs; and record findings. The learner is guided to identify locally available fodder and materials; observe and discuss suitable grass; sequence hay-making stages; practise safe drying, turning and storage using available materials.

Step 1: Learners observe locally available samples, pictures or records and identify the materials, needs or conditions relevant to the farm task.

Step 2: In groups, learners discuss the correct sequence of operations and identify suitable tools, hygiene measures and safety precautions.

Step 3: Learners demonstrate or simulate the relevant husbandry or feed-management procedure using safe materials and supervised practice.

Step 4: Learners record observations, evaluate the quality or suitability of the result and explain how responsible management supports animal welfare and the environment.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: Which conditions help preserve fodder as hay? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

_____

GRADE 9 AGRICULTURE – LESSON PLAN 2

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 2	WEEK: 1	LESSON: 2	TIME: 40 minutes | ROLL: _____

Strand: 1.0 Conservation of Resources

Sub-strand: 1.1 Conserving Animal Feed: Hay

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Describe the stages involved in making hay. Skills: Demonstrate safe preparation and storage of hay. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: Which conditions help preserve fodder as hay?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “1.1 Conserving Animal Feed: Hay” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: Which conditions help preserve fodder as hay?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to read relevant instructions, interpret diagrams and compare examples; work in groups to classify information; and present conclusions. The learner is guided to identify locally available fodder and materials; observe and discuss suitable grass; sequence hay-making stages; practise safe drying, turning and storage using available materials.

Step 1: Learners observe locally available samples, pictures or records and identify the materials, needs or conditions relevant to the farm task.

Step 2: In groups, learners discuss the correct sequence of operations and identify suitable tools, hygiene measures and safety precautions.

Step 3: Learners demonstrate or simulate the relevant husbandry or feed-management procedure using safe materials and supervised practice.

Step 4: Learners record observations, evaluate the quality or suitability of the result and explain how responsible management supports animal welfare and the environment.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

Lesson Development

5 minutes – Introduction

Connect “1.1 Conserving Animal Feed: Hay” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: Which conditions help preserve fodder as hay?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to apply the skill in a practical task; evaluate the outcome against agreed criteria; give peer feedback; and suggest improvements. The learner is guided to identify locally available fodder and materials; observe and discuss suitable grass; sequence hay-making stages; practise safe drying, turning and storage using available materials.

Step 1: Learners observe locally available samples, pictures or records and identify the materials, needs or conditions relevant to the farm task.

Step 2: In groups, learners discuss the correct sequence of operations and identify suitable tools, hygiene measures and safety precautions.

Step 3: Learners demonstrate or simulate the relevant husbandry or feed-management procedure using safe materials and supervised practice.

Step 4: Learners record observations, evaluate the quality or suitability of the result and explain how responsible management supports animal welfare and the environment.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: Which conditions help preserve fodder as hay? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

_____

_____

GRADE 9 AGRICULTURE – LESSON PLAN 13

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 2	WEEK: 4	LESSON: 1	TIME: 40 minutes | ROLL: _____

Strand: 1.0 Conservation of Resources

Sub-strand: 1.2 Conserving Leftover Food

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Identify methods of conserving safe leftover food. Skills: Demonstrate an appropriate method of conserving suitable leftover food. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How can leftover food be conserved safely?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “1.2 Conserving Leftover Food” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How can leftover food be conserved safely?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to observe samples, pictures or a demonstration; identify key features; discuss prior knowledge in pairs; and record findings. The learner is guided to sort examples of leftover foods; discuss food-safety risks; investigate suitable storage methods; practise hygienic covering, cooling and storage; record observations.

Step 1: Learners observe soil, water, plant or environmental examples and identify visible features or possible problems.

Step 2: Learners compare samples or methods in groups and discuss the factors that affect conservation and sustainable use.

Step 3: Learners carry out a safe field or model activity, record observations and demonstrate an appropriate conservation practice.

Step 4: Learners interpret their findings and present practical recommendations for responsible resource management.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How can leftover food be conserved safely? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

GRADE 9 AGRICULTURE – LESSON PLAN 14

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 2	WEEK: 4	LESSON: 2	TIME: 40 minutes | ROLL: _____

Strand: 1.0 Conservation of Resources

Sub-strand: 1.2 Conserving Leftover Food

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Explain hygiene and safety measures when handling leftovers. Skills: Demonstrate an appropriate method of conserving suitable leftover food. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How can leftover food be conserved safely?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “1.2 Conserving Leftover Food” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How can leftover food be conserved safely?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to read relevant instructions, interpret diagrams and compare examples; work in groups to classify information; and present conclusions. The learner is guided to sort examples of leftover foods; discuss food-safety risks; investigate suitable storage methods; practise hygienic covering, cooling and storage; record observations.

Step 1: Learners observe soil, water, plant or environmental examples and identify visible features or possible problems.

Step 2: Learners compare samples or methods in groups and discuss the factors that affect conservation and sustainable use.

Step 3: Learners carry out a safe field or model activity, record observations and demonstrate an appropriate conservation practice.

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 2	WEEK: 6	LESSON: 4	TIME: 40 minutes | ROLL: _____

Strand: 1.0 Conservation of Resources

Sub-strand: 1.3 Integrated Farming

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Describe the meaning and components of integrated farming. Skills: Develop a simple integrated-farm plan using local resources. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How can farm enterprises support one another?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “1.3 Integrated Farming” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How can farm enterprises support one another?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to observe samples, pictures or a demonstration; identify key features; discuss prior knowledge in pairs; and record findings. The learner is guided to observe examples or pictures of integrated farms; map links between crops, animals and farm by-products; discuss benefits and challenges; design and present a simple farm layout.

Step 1: Learners observe locally available samples, pictures or records and identify the materials, needs or conditions relevant to the farm task.

Step 2: In groups, learners discuss the correct sequence of operations and identify suitable tools, hygiene measures and safety precautions.

Step 3: Learners demonstrate or simulate the relevant husbandry or feed-management procedure using safe materials and supervised practice.

Step 4: Learners record observations, evaluate the quality or suitability of the result and explain how responsible management supports animal welfare and the environment.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How can farm enterprises support one another? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

_____

_____

GRADE 9 AGRICULTURE – LESSON PLAN 25

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 2	WEEK: 7	LESSON: 1	TIME: 40 minutes | ROLL: _____

Strand: 1.0 Conservation of Resources

Sub-strand: 1.3 Integrated Farming

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Explain benefits of linking crop and livestock enterprises. Skills: Develop a simple integrated-farm plan using local resources. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How can farm enterprises support one another?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “1.3 Integrated Farming” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How can farm enterprises support one another?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to read relevant instructions, interpret diagrams and compare examples; work in groups to classify information; and present conclusions. The learner is guided to observe examples or pictures of integrated farms; map links between crops, animals and farm by-products; discuss benefits and challenges; design and present a simple farm layout.

Step 1: Learners observe locally available samples, pictures or records and identify the materials, needs or conditions relevant to the farm task.

Step 2: In groups, learners discuss the correct sequence of operations and identify suitable tools, hygiene measures and safety precautions.

Step 3: Learners demonstrate or simulate the relevant husbandry or feed-management procedure using safe materials and supervised practice.

Connect “1.3 Integrated Farming” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How can farm enterprises support one another?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to apply the skill in a practical task; evaluate the outcome against agreed criteria; give peer feedback; and suggest improvements. The learner is guided to observe examples or pictures of integrated farms; map links between crops, animals and farm by-products; discuss benefits and challenges; design and present a simple farm layout.

Step 1: Learners observe locally available samples, pictures or records and identify the materials, needs or conditions relevant to the farm task.

Step 2: In groups, learners discuss the correct sequence of operations and identify suitable tools, hygiene measures and safety precautions.

Step 3: Learners demonstrate or simulate the relevant husbandry or feed-management procedure using safe materials and supervised practice.

Step 4: Learners record observations, evaluate the quality or suitability of the result and explain how responsible management supports animal welfare and the environment.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How can farm enterprises support one another? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

_____

_____

GRADE 9 AGRICULTURE – LESSON PLAN 36

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 2	WEEK: 9	LESSON: 4	TIME: 40 minutes | ROLL: _____

Strand: 2.0 Food Production Processes

Sub-strand: 2.1 Organic Gardening

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Identify requirements for establishing an organic garden. Skills: Establish or plan an organic garden using locally available resources. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How can a garden produce food while caring for the environment?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “2.1 Organic Gardening” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How can a garden produce food while caring for the environment?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to observe samples, pictures or a demonstration; identify key features; discuss prior knowledge in pairs; and record findings. The learner is guided to assess a suitable garden site; identify organic inputs; prepare planting beds or containers; practise composting, mulching and appropriate planting; maintain a garden record.

Step 1: Learners observe soil, water, plant or environmental examples and identify visible features or possible problems.

Step 2: Learners compare samples or methods in groups and discuss the factors that affect conservation and sustainable use.

Step 3: Learners carry out a safe field or model activity, record observations and demonstrate an appropriate conservation practice.

Step 4: Learners interpret their findings and present practical recommendations for responsible resource management.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How can a garden produce food while caring for the environment? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

GRADE 9 AGRICULTURE – LESSON PLAN 37

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 2	WEEK: 10	LESSON: 1	TIME: 40 minutes | ROLL: _____

Strand: 2.0 Food Production Processes

Sub-strand: 2.1 Organic Gardening

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Describe organic methods of improving soil fertility and managing pests. Skills: Establish or plan an organic garden using locally available resources. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How can a garden produce food while caring for the environment?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “2.1 Organic Gardening” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How can a garden produce food while caring for the environment?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to read relevant instructions, interpret diagrams and compare examples; work in groups to classify information; and present conclusions. The learner is guided to assess a suitable garden site; identify organic inputs; prepare planting beds or containers; practise composting, mulching and appropriate planting; maintain a garden record.

Step 1: Learners observe soil, water, plant or environmental examples and identify visible features or possible problems.

Step 2: Learners compare samples or methods in groups and discuss the factors that affect conservation and sustainable use.

Step 3: Learners carry out a safe field or model activity, record observations and demonstrate an appropriate conservation practice.

Step 4: Learners interpret their findings and present practical recommendations for responsible resource management.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How can a garden produce food while caring for the environment? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

GRADE 9 AGRICULTURE – LESSON PLAN 47

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 3	WEEK: 2	LESSON: 3	TIME: 40 minutes | ROLL: _____

Strand: 2.0 Food Production Processes

Sub-strand: 2.1 Organic Gardening

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Establish or plan an organic garden using locally available resources. Skills: Establish or plan an organic garden using locally available resources. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How can a garden produce food while caring for the environment?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “2.1 Organic Gardening” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How can a garden produce food while caring for the environment?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to apply the skill in a practical task; evaluate the outcome against agreed criteria; give peer feedback; and suggest improvements. The learner is guided to assess a suitable garden site; identify organic inputs; prepare planting beds or containers; practise composting, mulching and appropriate planting; maintain a garden record.

Step 1: Learners observe locally available samples, pictures or records and identify the materials, needs or conditions relevant to the farm task.

Step 2: In groups, learners discuss the correct sequence of operations and identify suitable tools, hygiene measures and safety precautions.

Step 3: Learners demonstrate or simulate the relevant husbandry or feed-management procedure using safe materials and supervised practice.

Step 4: Learners record observations, evaluate the quality or suitability of the result and explain how responsible management supports animal welfare and the environment.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How can a garden produce food while caring for the environment? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

_____

_____

GRADE 9 AGRICULTURE – LESSON PLAN 48

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 3	WEEK: 2	LESSON: 4	TIME: 40 minutes | ROLL: _____

Strand: 2.0 Food Production Processes

Sub-strand: 2.1 Organic Gardening

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Identify requirements for establishing an organic garden. Skills: Establish or plan an organic garden using locally available resources. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How can a garden produce food while caring for the environment?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “2.1 Organic Gardening” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How can a garden produce food while caring for the environment?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to observe samples, pictures or a demonstration; identify key features; discuss prior knowledge in pairs; and record findings. The learner is guided to assess a suitable garden site; identify organic inputs; prepare planting beds or containers; practise composting, mulching and appropriate planting; maintain a garden record.

Step 1: Learners observe soil, water, plant or environmental examples and identify visible features or possible problems.

Step 2: Learners compare samples or methods in groups and discuss the factors that affect conservation and sustainable use.

Step 3: Learners carry out a safe field or model activity, record observations and demonstrate an appropriate conservation practice.

Step 4: Learners interpret their findings and present practical recommendations for responsible resource management.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How can a garden produce food while caring for the environment? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

GRADE 9 AGRICULTURE – LESSON PLAN 49

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 3	WEEK: 3	LESSON: 1	TIME: 40 minutes | ROLL: _____

Strand: 2.0 Food Production Processes

Sub-strand: 2.1 Organic Gardening

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Describe organic methods of improving soil fertility and managing pests. Skills: Establish or plan an organic garden using locally available resources. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How can a garden produce food while caring for the environment?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “2.1 Organic Gardening” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How can a garden produce food while caring for the environment?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to read relevant instructions, interpret diagrams and compare examples; work in groups to classify information; and present conclusions. The learner is guided to assess a suitable garden site; identify organic inputs; prepare planting beds or containers; practise composting, mulching and appropriate planting; maintain a garden record.

Step 1: Learners observe soil, water, plant or environmental examples and identify visible features or possible problems.

Step 2: Learners compare samples or methods in groups and discuss the factors that affect conservation and sustainable use.

Step 3: Learners carry out a safe field or model activity, record observations and demonstrate an appropriate conservation practice.

Step 4: Learners interpret their findings and present practical recommendations for responsible resource management.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How can a garden produce food while caring for the environment? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

GRADE 9 AGRICULTURE – LESSON PLAN 50

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 3	WEEK: 3	LESSON: 2	TIME: 40 minutes | ROLL: _____

Strand: 2.0 Food Production Processes

Sub-strand: 2.2 Storage of Crop Produce

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Identify suitable methods and structures for storing different crop produce. Skills: Demonstrate hygienic preparation and storage of selected crop produce. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How does proper storage reduce crop losses?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “2.2 Storage of Crop Produce” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How does proper storage reduce crop losses?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to observe samples, pictures or a demonstration; identify key features; discuss prior knowledge in pairs; and record findings. The learner is guided to examine samples or images of crop produce; identify storage needs; investigate causes of spoilage; compare storage methods; practise sorting, drying, cleaning and safe storage.

Step 1: Learners examine seeds, plants, tools, pictures or field conditions and identify the requirements of the crop-production task.

Step 2: In groups, learners sequence the relevant operations and select suitable locally available materials and tools.

Step 3: Learners practise or demonstrate the relevant crop-management technique in a supervised plot, container or model activity.

Step 4: Learners record observations, assess the practice and explain how it contributes to healthy crops and sustainable production.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How does proper storage reduce crop losses? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

Key Inquiry Question: How does proper storage reduce crop losses?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “2.2 Storage of Crop Produce” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How does proper storage reduce crop losses?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to observe samples, pictures or a demonstration; identify key features; discuss prior knowledge in pairs; and record findings. The learner is guided to examine samples or images of crop produce; identify storage needs; investigate causes of spoilage; compare storage methods; practise sorting, drying, cleaning and safe storage.

Step 1: Learners examine seeds, plants, tools, pictures or field conditions and identify the requirements of the crop-production task.

Step 2: In groups, learners sequence the relevant operations and select suitable locally available materials and tools.

Step 3: Learners practise or demonstrate the relevant crop-management technique in a supervised plot, container or model activity.

Step 4: Learners record observations, assess the practice and explain how it contributes to healthy crops and sustainable production.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How does proper storage reduce crop losses? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

_____

_____

GRADE 9 AGRICULTURE – LESSON PLAN 59

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 3	WEEK: 5	LESSON: 3	TIME: 40 minutes | ROLL: _____

Strand: 2.0 Food Production Processes

Sub-strand: 2.2 Storage of Crop Produce

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Identify suitable methods and structures for storing different crop produce. Skills: Demonstrate hygienic preparation and storage of selected crop produce. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How does proper storage reduce crop losses?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “2.2 Storage of Crop Produce” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How does proper storage reduce crop losses?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to read relevant instructions, interpret diagrams and compare examples; work in groups to classify information; and present conclusions. The learner is guided to examine samples or images of crop produce; identify storage needs; investigate causes of spoilage; compare storage methods; practise sorting, drying, cleaning and safe storage.

Step 1: Learners examine seeds, plants, tools, pictures or field conditions and identify the requirements of the crop-production task.

Step 2: In groups, learners sequence the relevant operations and select suitable locally available materials and tools.

Step 3: Learners practise or demonstrate the relevant crop-management technique in a supervised plot, container or model activity.

Step 4: Learners record observations, assess the practice and explain how it contributes to healthy crops and sustainable production.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How does proper storage reduce crop losses? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

_____

_____

GRADE 9 AGRICULTURE – LESSON PLAN 60

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 3	WEEK: 5	LESSON: 4	TIME: 40 minutes | ROLL: _____

Strand: 2.0 Food Production Processes

Sub-strand: 2.3 Cooking: Using Flour Mixtures

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Identify ingredients and equipment used in preparing flour mixtures. Skills: Prepare a simple flour mixture while observing hygiene and safety. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: What affects the quality and safety of foods made from flour mixtures?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “2.3 Cooking: Using Flour Mixtures” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: What affects the quality and safety of foods made from flour mixtures?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to observe samples, pictures or a demonstration; identify key features; discuss prior knowledge in pairs; and record findings. The learner is guided to identify ingredients and utensils; read and interpret a simple recipe; measure and mix ingredients; prepare a selected product under safe supervision; evaluate the result.

Step 1: Learners examine examples, pictures, samples or records related to the focus and identify important features.

Step 2: Learners discuss the relevant principles and compare examples in pairs or groups.

Step 3: Learners complete a guided practical, planning, classification or problem-solving task using appropriate resources.

Step 4: Learners record findings, present conclusions and reflect on responsible application in their community.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: What affects the quality and safety of foods made from flour mixtures? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

GRADE 9 AGRICULTURE – LESSON PLAN 61

Lesson Development

5 minutes – Introduction

Connect “2.3 Cooking: Using Flour Mixtures” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: What affects the quality and safety of foods made from flour mixtures?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to apply the skill in a practical task; evaluate the outcome against agreed criteria; give peer feedback; and suggest improvements. The learner is guided to identify ingredients and utensils; read and interpret a simple recipe; measure and mix ingredients; prepare a selected product under safe supervision; evaluate the result.

Step 1: Learners observe locally available samples, pictures or records and identify the materials, needs or conditions relevant to the farm task.

Step 2: In groups, learners discuss the correct sequence of operations and identify suitable tools, hygiene measures and safety precautions.

Step 3: Learners demonstrate or simulate the relevant husbandry or feed-management procedure using safe materials and supervised practice.

Step 4: Learners record observations, evaluate the quality or suitability of the result and explain how responsible management supports animal welfare and the environment.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

The learner is guided to identify ingredients and utensils; read and interpret a simple recipe; measure and mix ingredients; prepare a selected product under safe supervision; evaluate the result.

Step 1: Learners examine examples, pictures, samples or records related to the focus and identify important features.

Step 2: Learners discuss the relevant principles and compare examples in pairs or groups.

Step 3: Learners complete a guided practical, planning, classification or problem-solving task using appropriate resources.

Step 4: Learners record findings, present conclusions and reflect on responsible application in their community.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: What affects the quality and safety of foods made from flour mixtures? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

GRADE 9 AGRICULTURE – LESSON PLAN 70

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 3	WEEK: 8	LESSON: 2	TIME: 40 minutes | ROLL: _____

Strand: 2.0 Food Production Processes

Sub-strand: 2.3 Cooking: Using Flour Mixtures

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Describe procedures for preparing selected flour-based foods. Skills: Prepare a simple flour mixture while observing hygiene and safety. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: What affects the quality and safety of foods made from flour mixtures?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “2.3 Cooking: Using Flour Mixtures” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: What affects the quality and safety of foods made from flour mixtures?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to investigate the process using locally available materials; sequence the steps; practise the relevant skill safely; and record observations. The learner is guided to identify ingredients and utensils; read and interpret a simple recipe; measure and mix ingredients; prepare a selected product under safe supervision; evaluate the result.

Step 1: Learners examine examples, pictures, samples or records related to the focus and identify important features.

Step 2: Learners discuss the relevant principles and compare examples in pairs or groups.

Step 3: Learners complete a guided practical, planning, classification or problem-solving task using appropriate resources.

Step 4: Learners record findings, present conclusions and reflect on responsible application in their community.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: What affects the quality and safety of foods made from flour mixtures? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

GRADE 9 AGRICULTURE – LESSON PLAN 71

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 3	WEEK: 8	LESSON: 3	TIME: 40 minutes | ROLL: _____

Strand: 2.0 Food Production Processes

Sub-strand: 2.3 Cooking: Using Flour Mixtures

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Prepare a simple flour mixture while observing hygiene and safety. Skills: Prepare a simple flour mixture while observing hygiene and safety. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: What affects the quality and safety of foods made from flour mixtures?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “2.3 Cooking: Using Flour Mixtures” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: What affects the quality and safety of foods made from flour mixtures?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to apply the skill in a practical task; evaluate the outcome against agreed criteria; give peer feedback; and suggest improvements. The learner is guided to identify ingredients and utensils; read and interpret a simple recipe; measure and mix ingredients; prepare a selected product under safe supervision; evaluate the result.

Step 1: Learners observe locally available samples, pictures or records and identify the materials, needs or conditions relevant to the farm task.

Step 2: In groups, learners discuss the correct sequence of operations and identify suitable tools, hygiene measures and safety precautions.

Step 3: Learners demonstrate or simulate the relevant husbandry or feed-management procedure using safe materials and supervised practice.

Step 4: Learners record observations, evaluate the quality or suitability of the result and explain how responsible management supports animal welfare and the environment.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: What affects the quality and safety of foods made from flour mixtures? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

GRADE 9 AGRICULTURE – LESSON PLAN 74

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 3	WEEK: 9	LESSON: 2	TIME: 40 minutes | ROLL: _____

Strand: 3.0 Hygiene Practices

Sub-strand: 3.1 Cleaning Waste Disposal Facilities

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Identify common waste-disposal facilities and their hygiene needs. Skills: Demonstrate appropriate cleaning and personal-protection practices. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: Why must waste-disposal facilities be kept clean?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “3.1 Cleaning Waste Disposal Facilities” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: Why must waste-disposal facilities be kept clean?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to observe samples, pictures or a demonstration; identify key features; discuss prior knowledge in pairs; and record findings. The learner is guided to inspect diagrams or approved school facilities; identify hazards; select protective equipment; sequence safe cleaning steps; practise handwashing and appropriate waste handling.

Step 1: Learners examine examples, pictures, samples or records related to the focus and identify important features.

Step 2: Learners discuss the relevant principles and compare examples in pairs or groups.

Step 3: Learners complete a guided practical, planning, classification or problem-solving task using appropriate resources.

Step 4: Learners record findings, present conclusions and reflect on responsible application in their community.

- **Knowledge:** Explain safe procedures for cleaning waste-disposal facilities. Skills: Demonstrate appropriate cleaning and personal-protection practices. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: Why must waste-disposal facilities be kept clean?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “3.1 Cleaning Waste Disposal Facilities” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: Why must waste-disposal facilities be kept clean?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to apply the skill in a practical task; evaluate the outcome against agreed criteria; give peer feedback; and suggest improvements. The learner is guided to inspect diagrams or approved school facilities; identify hazards; select protective equipment; sequence safe cleaning steps; practise handwashing and appropriate waste handling.

Step 1: Learners observe locally available samples, pictures or records and identify the materials, needs or conditions relevant to the farm task.

Step 2: In groups, learners discuss the correct sequence of operations and identify suitable tools, hygiene measures and safety precautions.

Step 3: Learners demonstrate or simulate the relevant husbandry or feed-management procedure using safe materials and supervised practice.

Step 4: Learners record observations, evaluate the quality or suitability of the result and explain how responsible management supports animal welfare and the environment.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: Why must waste-disposal facilities be kept clean? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

_____

_____

GRADE 9 AGRICULTURE – LESSON PLAN 82

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 4	WEEK: 1	LESSON: 2	TIME: 40 minutes | ROLL: _____

Strand: 3.0 Hygiene Practices

Sub-strand: 3.1 Cleaning Waste Disposal Facilities

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Demonstrate appropriate cleaning and personal-protection practices. Skills: Demonstrate appropriate cleaning and personal-protection practices. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: Why must waste-disposal facilities be kept clean?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “3.1 Cleaning Waste Disposal Facilities” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: Why must waste-disposal facilities be kept clean?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to observe samples, pictures or a demonstration; identify key features; discuss prior knowledge in pairs; and record findings. The learner is guided to inspect diagrams or approved school facilities; identify hazards; select protective equipment; sequence safe cleaning steps; practise handwashing and appropriate waste handling.

Step 1: Learners examine examples, pictures, samples or records related to the focus and identify important features.

Step 2: Learners discuss the relevant principles and compare examples in pairs or groups.

Step 3: Learners complete a guided practical, planning, classification or problem-solving task using appropriate resources.

Step 4: Learners record findings, present conclusions and reflect on responsible application in their community.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: Why must waste-disposal facilities be kept clean? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

GRADE 9 AGRICULTURE – LESSON PLAN 83

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 4	WEEK: 1	LESSON: 3	TIME: 40 minutes | ROLL: _____

Strand: 3.0 Hygiene Practices

Sub-strand: 3.2 Disinfecting Clothings and Household Articles

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Distinguish cleaning from disinfection. Skills: Demonstrate safe disinfection of a suitable washable article. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How can household articles be disinfected safely?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “3.2 Disinfecting Clothings and Household Articles” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How can household articles be disinfected safely?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to observe samples, pictures or a demonstration; identify key features; discuss prior knowledge in pairs; and record findings. The learner is guided to compare cleaning and disinfection; read product labels and safety symbols; discuss dilution and contact-time precautions; practise a safe teacher-supervised procedure on suitable articles.

Step 1: Learners examine examples, pictures, samples or records related to the focus and identify important features.

Step 2: Learners discuss the relevant principles and compare examples in pairs or groups.

Step 3: Learners complete a guided practical, planning, classification or problem-solving task using appropriate resources.

Step 4: Learners record findings, present conclusions and reflect on responsible application in their community.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How can household articles be disinfected safely? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Learning experiences from the scheme: The learner is guided to read relevant instructions, interpret diagrams and compare examples; work in groups to classify information; and present conclusions. The learner is guided to compare cleaning and disinfection; read product labels and safety symbols; discuss dilution and contact-time precautions; practise a safe teacher-supervised procedure on suitable articles.

Step 1: Learners examine examples, pictures, samples or records related to the focus and identify important features.

Step 2: Learners discuss the relevant principles and compare examples in pairs or groups.

Step 3: Learners complete a guided practical, planning, classification or problem-solving task using appropriate resources.

Step 4: Learners record findings, present conclusions and reflect on responsible application in their community.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How can household articles be disinfected safely? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

GRADE 9 AGRICULTURE – LESSON PLAN 93

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 4	WEEK: 4	LESSON: 1	TIME: 40 minutes | ROLL: _____

Strand: 3.0 Hygiene Practices

Sub-strand: 3.2 Disinfecting Clothings and Household Articles

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Identify suitable disinfecting agents and precautions for household articles. Skills: Demonstrate safe disinfection of a suitable washable article. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How can household articles be disinfected safely?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “3.2 Disinfecting Clothings and Household Articles” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How can household articles be disinfected safely?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to investigate the process using locally available materials; sequence the steps; practise the relevant skill safely; and record observations. The learner is guided to compare cleaning and disinfection; read product labels and safety symbols; discuss dilution and contact-time precautions; practise a safe teacher-supervised procedure on suitable articles.

Step 1: Learners examine examples, pictures, samples or records related to the focus and identify important features.

Step 2: Learners discuss the relevant principles and compare examples in pairs or groups.

Step 3: Learners complete a guided practical, planning, classification or problem-solving task using appropriate resources.

Step 4: Learners record findings, present conclusions and reflect on responsible application in their community.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How can household articles be disinfected safely? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

GRADE 9 AGRICULTURE – LESSON PLAN 94

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 4	WEEK: 4	LESSON: 2	TIME: 40 minutes | ROLL: _____

Strand: 3.0 Hygiene Practices

Sub-strand: 3.2 Disinfecting Clothings and Household Articles

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Demonstrate safe disinfection of a suitable washable article. Skills: Demonstrate safe disinfection of a suitable washable article. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How can household articles be disinfected safely?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “3.2 Disinfecting Clothings and Household Articles” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How can household articles be disinfected safely?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to apply the skill in a practical task; evaluate the outcome against agreed criteria; give peer feedback; and suggest improvements. The learner is guided to compare cleaning and disinfection; read product labels and safety symbols; discuss dilution and contact-time precautions; practise a safe teacher-supervised procedure on suitable articles.

Step 1: Learners observe locally available samples, pictures or records and identify the materials, needs or conditions relevant to the farm task.

Step 2: In groups, learners discuss the correct sequence of operations and identify suitable tools, hygiene measures and safety precautions.

Step 3: Learners demonstrate or simulate the relevant husbandry or feed-management procedure using safe materials and supervised practice.

Step 4: Learners record observations, evaluate the quality or suitability of the result and explain how responsible management supports animal welfare and the environment.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How can household articles be disinfected safely? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

_____

_____

GRADE 9 AGRICULTURE – LESSON PLAN 95

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 4	WEEK: 4	LESSON: 3	TIME: 40 minutes | ROLL: _____

Strand: 4.0 Production Techniques

Sub-strand: 4.1 Grafting in Plants

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Identify tools, materials and plant parts used in grafting. Skills: Demonstrate a simple grafting technique using suitable plant material. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How does grafting help improve or propagate plants?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “4.1 Grafting in Plants” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How does grafting help improve or propagate plants?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to observe samples, pictures or a demonstration; identify key features; discuss prior knowledge in pairs; and record findings. The learner is guided to observe grafted plants or diagrams; identify scion and rootstock; compare grafting methods; practise tool-safety routines and a suitable grafting procedure; monitor aftercare.

Step 1: Learners examine seeds, plants, tools, pictures or field conditions and identify the requirements of the crop-production task.

Step 2: In groups, learners sequence the relevant operations and select suitable locally available materials and tools.

Step 3: Learners practise or demonstrate the relevant crop-management technique in a supervised plot, container or model activity.

Step 4: Learners record observations, assess the practice and explain how it contributes to healthy crops and sustainable production.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How does grafting help improve or propagate plants? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

GRADE 9 AGRICULTURE – LESSON PLAN 96

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 4	WEEK: 4	LESSON: 4	TIME: 40 minutes | ROLL: _____

Strand: 4.0 Production Techniques

Sub-strand: 4.1 Grafting in Plants

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Describe common grafting procedures and aftercare. Skills: Demonstrate a simple grafting technique using suitable plant material. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How does grafting help improve or propagate plants?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “4.1 Grafting in Plants” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How does grafting help improve or propagate plants?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to read relevant instructions, interpret diagrams and compare examples; work in groups to classify information; and present conclusions. The learner is guided to observe grafted plants or diagrams; identify scion and rootstock; compare grafting methods; practise tool-safety routines and a suitable grafting procedure; monitor aftercare.

Step 1: Learners examine seeds, plants, tools, pictures or field conditions and identify the requirements of the crop-production task.

Step 2: In groups, learners sequence the relevant operations and select suitable locally available materials and tools.

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Identify tools, materials and plant parts used in grafting. Skills: Demonstrate a simple grafting technique using suitable plant material. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How does grafting help improve or propagate plants?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “4.1 Grafting in Plants” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How does grafting help improve or propagate plants?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to read relevant instructions, interpret diagrams and compare examples; work in groups to classify information; and present conclusions. The learner is guided to observe grafted plants or diagrams; identify scion and rootstock; compare grafting methods; practise tool-safety routines and a suitable grafting procedure; monitor aftercare.

Step 1: Learners examine seeds, plants, tools, pictures or field conditions and identify the requirements of the crop-production task.

Step 2: In groups, learners sequence the relevant operations and select suitable locally available materials and tools.

Step 3: Learners practise or demonstrate the relevant crop-management technique in a supervised plot, container or model activity.

Step 4: Learners record observations, assess the practice and explain how it contributes to healthy crops and sustainable production.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How does grafting help improve or propagate plants? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

_____

_____

GRADE 9 AGRICULTURE – LESSON PLAN 105

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 4	WEEK: 7	LESSON: 1	TIME: 40 minutes | ROLL: _____

Strand: 4.0 Production Techniques

Sub-strand: 4.1 Grafting in Plants

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Describe common grafting procedures and aftercare. Skills: Demonstrate a simple grafting technique using suitable plant material. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How does grafting help improve or propagate plants?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “4.1 Grafting in Plants” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How does grafting help improve or propagate plants?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to investigate the process using locally available materials; sequence the steps; practise the relevant skill safely; and record observations. The learner is guided to observe grafted plants or diagrams; identify scion and rootstock; compare grafting methods; practise tool-safety routines and a suitable grafting procedure; monitor aftercare.

Step 1: Learners examine seeds, plants, tools, pictures or field conditions and identify the requirements of the crop-production task.

Step 2: In groups, learners sequence the relevant operations and select suitable locally available materials and tools.

Step 3: Learners practise or demonstrate the relevant crop-management technique in a supervised plot, container or model activity.

Step 4: Learners record observations, assess the practice and explain how it contributes to healthy crops and sustainable production.

TERM: 4	WEEK: 7	LESSON: 4	TIME: 40 minutes | ROLL: _____

Strand: 4.0 Production Techniques

Sub-strand: 4.2 Homemade Sun Dryer

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Identify materials and design features of a simple sun dryer. Skills: Construct or model a simple sun dryer and evaluate its use. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How can a sun dryer help preserve farm produce?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “4.2 Homemade Sun Dryer” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How can a sun dryer help preserve farm produce?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to observe samples, pictures or a demonstration; identify key features; discuss prior knowledge in pairs; and record findings. The learner is guided to investigate traditional drying methods; sketch and label a sun-dryer design; select safe locally available materials; construct a model or prototype in groups; test and record observations.

Step 1: Learners examine examples, pictures, samples or records related to the focus and identify important features.

Step 2: Learners discuss the relevant principles and compare examples in pairs or groups.

Step 3: Learners complete a guided practical, planning, classification or problem-solving task using appropriate resources.

Step 4: Learners record findings, present conclusions and reflect on responsible application in their community.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

Step 2: In groups, learners discuss the correct sequence of operations and identify suitable tools, hygiene measures and safety precautions.

Step 3: Learners demonstrate or simulate the relevant husbandry or feed-management procedure using safe materials and supervised practice.

Step 4: Learners record observations, evaluate the quality or suitability of the result and explain how responsible management supports animal welfare and the environment.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How can a sun dryer help preserve farm produce? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

_____

_____

GRADE 9 AGRICULTURE – LESSON PLAN 116

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 4	WEEK: 9	LESSON: 4	TIME: 40 minutes | ROLL: _____

Strand: 4.0 Production Techniques

Sub-strand: 4.2 Homemade Sun Dryer

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Construct or model a simple sun dryer and evaluate its use. Skills: Construct or model a simple sun dryer and evaluate its use. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How can a sun dryer help preserve farm produce?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “4.2 Homemade Sun Dryer” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How can a sun dryer help preserve farm produce?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to observe samples, pictures or a demonstration; identify key features; discuss prior knowledge in pairs; and record findings. The learner is guided to investigate traditional drying methods; sketch and label a sun-dryer design; select safe locally available materials; construct a model or prototype in groups; test and record observations.

Step 1: Learners examine examples, pictures, samples or records related to the focus and identify important features.

Step 2: Learners discuss the relevant principles and compare examples in pairs or groups.

Step 3: Learners complete a guided practical, planning, classification or problem-solving task using appropriate resources.

Step 4: Learners record findings, present conclusions and reflect on responsible application in their community.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How can a sun dryer help preserve farm produce? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

GRADE 9 AGRICULTURE – LESSON PLAN 117

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 4	WEEK: 10	LESSON: 1	TIME: 40 minutes | ROLL: _____

Strand: 4.0 Production Techniques

Sub-strand: 4.2 Homemade Sun Dryer

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Identify materials and design features of a simple sun dryer. Skills: Construct or model a simple sun dryer and evaluate its use. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How can a sun dryer help preserve farm produce?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “4.2 Homemade Sun Dryer” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How can a sun dryer help preserve farm produce?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to read relevant instructions, interpret diagrams and compare examples; work in groups to classify information; and present conclusions. The learner is guided to investigate traditional drying methods; sketch and label a sun-dryer design; select safe locally available materials; construct a model or prototype in groups; test and record observations.

Step 1: Learners examine examples, pictures, samples or records related to the focus and identify important features.

Step 2: Learners discuss the relevant principles and compare examples in pairs or groups.

Step 3: Learners complete a guided practical, planning, classification or problem-solving task using appropriate resources.

Step 4: Learners record findings, present conclusions and reflect on responsible application in their community.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How can a sun dryer help preserve farm produce? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

GRADE 9 AGRICULTURE – LESSON PLAN 118

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 4	WEEK: 10	LESSON: 2	TIME: 40 minutes | ROLL: _____

Strand: 4.0 Production Techniques

Sub-strand: 4.2 Homemade Sun Dryer

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Explain how a sun dryer reduces moisture in produce. Skills: Construct or model a simple sun dryer and evaluate its use. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How can a sun dryer help preserve farm produce?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “4.2 Homemade Sun Dryer” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How can a sun dryer help preserve farm produce?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to investigate the process using locally available materials; sequence the steps; practise the relevant skill safely; and record observations. The learner is guided to investigate traditional drying methods; sketch and label a sun-dryer design; select safe locally available materials; construct a model or prototype in groups; test and record observations.

Step 1: Learners examine examples, pictures, samples or records related to the focus and identify important features.

Step 2: Learners discuss the relevant principles and compare examples in pairs or groups.

Step 3: Learners complete a guided practical, planning, classification or problem-solving task using appropriate resources.

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How can a sun dryer help preserve farm produce? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

GRADE 9 AGRICULTURE – LESSON PLAN 119

SCHOOL: _____	LEVEL: Grade 9	LEARNING AREA: Agriculture	DATE: _____
TERM: 4	WEEK: 10	LESSON: 3	TIME: 40 minutes | ROLL: _____

Strand: 4.0 Production Techniques

Sub-strand: 4.2 Homemade Sun Dryer

Lesson Learning Outcomes

At the end of the lesson, the learner should be able to:

- **Knowledge:** Construct or model a simple sun dryer and evaluate its use. Skills: Construct or model a simple sun dryer and evaluate its use. Attitude: demonstrate responsibility, cooperation and care for safety and the environment while undertaking the activity.

Key Inquiry Question: How can a sun dryer help preserve farm produce?

Learning Resources: Locally available materials, samples, charts/diagrams, tools and protective equipment as appropriate; Agriculture learner's book; teacher-prepared worksheets.

Organization of Learning Learners work individually, in pairs and in groups. Practical farm activities are carried out under appropriate supervision, with safe handling of tools, protective equipment where needed, hygiene and care for the environment.

Lesson Development

5 minutes – Introduction

Connect “4.2 Homemade Sun Dryer” to learners’ experiences at home, school or in the community. Present a sample, picture, farm situation, tool or short question. Learners observe, share prior knowledge and consider the inquiry question: How can a sun dryer help preserve farm produce?

30 minutes – Lesson Development

Learning experiences from the scheme: The learner is guided to apply the skill in a practical task; evaluate the outcome against agreed criteria; give peer feedback; and suggest improvements. The learner is guided to investigate traditional drying methods; sketch and label a sun-dryer design; select safe locally available materials; construct a model or prototype in groups; test and record observations.

Step 1: Learners observe locally available samples, pictures or records and identify the materials, needs or conditions relevant to the farm task.

Step 2: In groups, learners discuss the correct sequence of operations and identify suitable tools, hygiene measures and safety precautions.

Step 3: Learners demonstrate or simulate the relevant husbandry or feed-management procedure using safe materials and supervised practice.

Step 4: Learners record observations, evaluate the quality or suitability of the result and explain how responsible management supports animal welfare and the environment.

Extended Activities

Learners who finish early investigate a local farm example, prepare a labelled diagram or management plan, or suggest an improvement to the practice studied. Learners needing support use picture sequences, real samples, guided questions and peer demonstration. Any farm or field task must be supervised; tools, animals, chemicals and biological materials must be handled only under school safety procedures.

5 minutes – Conclusion

Learners summarise the key practice or principle and answer the inquiry question: How can a sun dryer help preserve farm produce? They complete an exit task by naming a key condition, sequencing a stage, identifying a safety measure or stating one practical recommendation.

Assessment

Suggested assessment evidence: Observation checklist, oral questions, learner records, practical task and peer/self-assessment.

Reflection in the lesson / self-remarks

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

To be completed after teaching: record learners who achieved the outcomes, practical skills demonstrated, safe handling and participation, challenges encountered, learners requiring support and the next instructional step.

Implementation Notes

This collection contains 120 Grade 9 Agriculture lesson plans organised across Terms 1, 2 and 3 according to the teacher-prepared annual scheme. The scheme lists 120 suggested lessons across 10 sub-strands.

The allocation of 40 lessons per term and 4 lessons per week for 10 teaching weeks is a planning proposal, not a KICD-prescribed term allocation. Adjust it to the school calendar, learner needs, local resources and assessment requirements.

This is an original teacher-prepared resource aligned to the Grade 9 Agriculture curriculum design, not an official KICD publication. Practical farm activities require appropriate supervision, protective equipment and safe handling of tools, animals and materials.
