GRADE 9 PRE-TECHNICAL STUDIES
FULL-YEAR SCHEME OF WORK

Teacher-prepared planning document aligned to the KICD Grade 9 Pre-Technical Studies Curriculum Design

Planning note: The KICD curriculum design suggests 120 lessons across 13 sub-strands. This scheme distributes them as 40 lessons per term (4 lessons per week over 10 teaching weeks). This term distribution is a planning proposal, not a term allocation prescribed by KICD. Adjust pacing to the school calendar, learner needs, availability of tools/materials and assessment requirements.

School: _____	Teacher: _____	TSC No.: _____	Year: _____
Learning Area: Pre-Technical Studies	Grade: 9	Term: All Terms	Lessons: 120

TERM 1

WK	LSN	STRAND	SUB-STRAND	LESSON LEARNING OUTCOMES	LEARNING EXPERIENCES	KEY INQUIRY QUESTIONS	LEARNING RESOURCES	ASSESSMENT METHODS	REFLECTION
1	1	1.0 Foundations of Pre-Technical Studies	1.1 Safety on Raised Platforms	At the end of the lesson, the learner should be able to: Knowledge: Identify types of raised platforms used in everyday activities. Skills: Demonstrate safe practices when using or working near raised platforms. Attitude: demonstrate responsibility, cooperation, creativity and commitment to safe and ethical practices.	The learner is guided to observe examples, identify features and discuss prior knowledge in pairs; findings are recorded in a learning journal. The learner is guided to observe raised platforms in the school or community; identify hazards from pictures and realia; discuss risk-control measures; practise safe inspection and use of appropriate protective equipment under supervision.	How can safety be maintained when working on raised platforms?	Relevant tools/equipment and safe materials; PPE where appropriate; charts, drawings or digital devices; learner's book; teacher-prepared worksheets.	Oral questions, observation checklist, written task, practical performance, portfolio and peer/self-assessment as appropriate.	_____
1	2	1.0 Foundations of Pre-Technical Studies	1.1 Safety on Raised Platforms	At the end of the lesson, the learner should be able to: Knowledge: Explain hazards associated with working on raised platforms and ways of preventing accidents. Skills: Demonstrate safe practices when using or working near raised platforms. Attitude: demonstrate responsibility, cooperation, creativity and commitment to safe and ethical practices.	The learner is guided to read instructions, interpret diagrams and compare examples; groups classify information and present conclusions. The learner is guided to observe raised platforms in the school or community; identify hazards from pictures and realia; discuss risk-control measures; practise safe inspection and use of appropriate protective equipment under supervision.	How can safety be maintained when working on raised platforms?	Relevant tools/equipment and safe materials; PPE where appropriate; charts, drawings or digital devices; learner's book; teacher-prepared worksheets.	Oral questions, observation checklist, written task, practical performance, portfolio and peer/self-assessment as appropriate.	_____
1	3	1.0 Foundations of Pre-Technical Studies	1.1 Safety on Raised Platforms	At the end of the lesson, the learner should be able to: Knowledge: Demonstrate safe practices when using or working near raised platforms. Skills: Demonstrate safe practices when using or working near raised platforms. Attitude: demonstrate responsibility, cooperation, creativity	The learner is guided to investigate the concept through a guided demonstration or practical activity; steps and observations are recorded. The learner is guided to observe raised platforms in the school or community; identify hazards from pictures and realia; discuss risk-control measures; practise safe	How can safety be maintained when working on raised platforms? The learner is guided to apply the skill in a task, evaluate the outcome using agreed criteria, give peer feedback and suggest improvements. The learner is guided to examine labelled containers and safety symbols; classify examples of hazardous substances; interpret safety instructions; discuss safe storage and disposal; practise responding to a simulated spill without touching the substance.	How can hazardous substances be handled safely?	Relevant tools/equipment and safe materials; PPE where appropriate; charts, drawings or digital devices; learner's book; teacher-prepared worksheets.	Oral questions, observation checklist, written task, practical performance, portfolio and peer/self-assessment as appropriate.	_____
5	1	1.0 Foundations of Pre-Technical Studies	1.2 Handling Hazardous Substances	At the end of the lesson, the learner should be able to: Knowledge: Demonstrate appropriate safety precautions when dealing with hazardous substances. Skills: Demonstrate appropriate safety precautions when dealing with hazardous substances. Attitude: demonstrate responsibility, cooperation, creativity and commitment to safe and ethical practices.	The learner is guided to observe examples, identify features and discuss prior knowledge in pairs; findings are recorded in a learning journal. The learner is guided to examine labelled containers and safety symbols; classify examples of hazardous substances; interpret safety instructions; discuss safe storage and disposal; practise responding to a simulated spill without touching the substance.	How can hazardous substances be handled safely?	Relevant tools/equipment and safe materials; PPE where appropriate; charts, drawings or digital devices; learner's book; teacher-prepared worksheets.	Oral questions, observation checklist, written task, practical performance, portfolio and peer/self-assessment as appropriate.	_____
5	2	1.0 Foundations of Pre-Technical Studies	1.3 Self-Exploration and Career Development	At the end of the lesson, the learner should be able to: Knowledge: Identify personal talents, abilities and interests. Skills: Analyse ethical and unethical practices in the use of talents and make an informed career choice. Attitude: demonstrate responsibility, cooperation, creativity and commitment to safe and ethical practices.	The learner is guided to observe examples, identify features and discuss prior knowledge in pairs; findings are recorded in a learning journal. The learner is guided to reflect on personal interests and strengths; discuss ways of nurturing talents; match abilities to career pathways; engage a resource person where available; prepare and present a personal career pathway profile.	How can talents and abilities guide career choices?	Relevant tools/equipment and safe materials; PPE where appropriate; charts, drawings or digital devices; learner's book; teacher-prepared worksheets.	Oral questions, observation checklist, written task, practical performance, portfolio and peer/self-assessment as appropriate.	_____
5	3	1.0 Foundations of Pre-Technical Studies	1.3 Self-Exploration and Career Development	At the end of the lesson, the learner should be able to: Knowledge: Relate talents and abilities to relevant career pathways. Skills: Analyse ethical and unethical practices in the use of talents and make an informed career choice. Attitude: demonstrate responsibility,	The learner is guided to read instructions, interpret diagrams and compare examples; groups classify information and present conclusions. The learner is guided to reflect on personal interests and strengths; discuss ways of nurturing talents; match abilities to career pathways;	How can talents and abilities guide career choices? Skills: Produce and interpret simple oblique drawings using appropriate drawing instruments. Attitude: demonstrate responsibility, cooperation, creativity and commitment to safe and ethical practices.	to observe examples, identify features and discuss prior knowledge in pairs; findings are recorded in a learning journal. The learner is guided to observe three-dimensional objects and sample drawings; identify the front face and receding axes; practise drawing basic forms; add visible details and dimensions where required; display and critique drawings using agreed criteria.	projection communicate the form of an object?	tools/equipment and safe materials; PPE where appropriate; charts, drawings or digital devices; learner's book; teacher-prepared worksheets.	observation checklist, written task, practical performance, portfolio and peer/self-assessment as appropriate.	
10	1	2.0 Communication in Pre-Technical Studies	2.1 Oblique Projection	At the end of the lesson, the learner should be able to: Knowledge: Describe the steps for drawing objects using oblique projection. Skills: Produce and interpret simple oblique drawings using appropriate drawing instruments. Attitude: demonstrate responsibility, cooperation, creativity and commitment to safe and ethical practices.	The learner is guided to read instructions, interpret diagrams and compare examples; groups classify information and present conclusions. The learner is guided to observe three-dimensional objects and sample drawings; identify the front face and receding axes; practise drawing basic forms; add visible details and dimensions where required; display and critique drawings using agreed criteria.	How can oblique projection communicate the form of an object?	Relevant tools/equipment and safe materials; PPE where appropriate; charts, drawings or digital devices; learner's book; teacher-prepared worksheets.	Oral questions, observation checklist, written task, practical performance, portfolio and peer/self-assessment as appropriate.	_____
10	2	2.0 Communication in Pre-Technical Studies	2.2 Visual Programming	At the end of the lesson, the learner should be able to: Knowledge: Explain the meaning and basic elements of visual programming. Skills: Design, test and improve a simple visual programme to solve a given problem. Attitude: demonstrate responsibility, cooperation, creativity and commitment to safe and ethical practices.	The learner is guided to observe examples, identify features and discuss prior knowledge in pairs; findings are recorded in a learning journal. The learner is guided to explore a suitable visual programming environment or unplugged block cards; identify sequence, events, loops and conditions; plan an algorithm; create a simple programme; test, debug and present the solution.	How can visual programming be used to solve everyday problems?	Relevant tools/equipment and safe materials; PPE where appropriate; charts, drawings or digital devices; learner's book; teacher-prepared worksheets.	Oral questions, observation checklist, written task, practical performance, portfolio and peer/self-assessment as appropriate.	_____
10	3	2.0 Communication in Pre-Technical Studies	2.2 Visual Programming	At the end of the lesson, the learner should be able to: Knowledge: Identify visual programming tools and blocks used to create simple programmes. Skills: Design, test and improve a simple visual programme to solve a given problem. Attitude: demonstrate responsibility, cooperation, creativity and commitment to safe and ethical practices.	The learner is guided to read instructions, interpret diagrams and compare examples; groups classify information and present conclusions. The learner is guided to explore a suitable visual programming environment or unplugged block cards; identify sequence, events, loops and conditions; plan an algorithm; create a simple programme; test, debug and present the solution.	How can visual programming be used to solve everyday problems?	Relevant tools/equipment and safe materials; PPE where appropriate; charts, drawings or digital devices; learner's book; teacher-prepared worksheets.	Oral questions, observation checklist, written task, practical performance, portfolio and peer/self-assessment as appropriate.	_____
