JUNIOR SCHOOL LEARNING HUB

GRADE 8 • INTEGRATED SCIENCE • FULL-YEAR SCHEME OF WORK • 2027

Teacher: _____ TSC No.: _____ School: _____

Curriculum basis: KICD Grade 8 Integrated Science Curriculum Design (revised 2024). Suggested content allocation: 150 lessons. School term calendar: Term 1 (14 weeks), Term 2 (13 weeks), Term 3 (9 weeks).

Planning note: the 150 suggested curriculum lessons are sequenced across the year. The remaining weekly timetable periods should be used for practical consolidation, formative assessment, CATs, feedback, remediation, revision and school-based activities. Adjust pacing to the actual school calendar and learner progress.

STRAND	SUB-STRAND	SUGGESTED LESSONS
1.0 Mixtures, Elements and Compounds	1.1 Elements and Compounds	18
1.0 Mixtures, Elements and Compounds	1.2 Physical and chemical changes	22
1.0 Mixtures, Elements and Compounds	1.3 Classes of fire	20
2.0 Living Things and the Environment	2.1 The Cell	20
2.0 Living Things and the Environment	2.2 Movement of materials in and out of the cell	16
2.0 Living Things and the Environment	2.3 Reproduction in human beings	18
3.0 Force and Energy	3.1 Transformation of Energy	20
3.0 Force and Energy	3.2 Pressure	16
TOTAL	**All strands**	**150**

TERM 1 — DETAILED LESSON SEQUENCE

Planned curriculum lessons: 58. Use the remaining allocated weekly periods for assessment, practical work, revision, feedback and remediation.

STRAND	SUB-STRAND	LESSON LEARNING OUTCOMES	LEARNING EXPERIENCES	KEY INQUIRY QUESTIONS	LEARNING RESOURCES	ASSESSMENT METHOD
s, Elements and s	1.1 Elements and Compounds	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Distinguish elements, compounds and mixtures using particle models and familiar examples. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How can we tell what a substance is made of?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
s, Elements and s	1.1 Elements and Compounds	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Classify common substances and explain the basis for classification. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How can we tell what a substance is made of?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
s, Elements and s	1.1 Elements and Compounds	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Interpret chemical symbols and simple formulae. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How can we tell what a substance is made of?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
s, Elements and s	1.1 Elements and Compounds	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Construct and explain simple particle representations of elements and compounds. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How can we tell what a substance is made of?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
s, Elements and s	1.1 Elements and Compounds	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Distinguish elements, compounds and mixtures using particle models and familiar examples. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How can we tell what a substance is made of?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
s, Elements and s	1.1 Elements and Compounds	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Classify common substances and explain the basis for classification. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion. STRAND	SUB-STRAND	LESSON LEARNING OUTCOMES	LEARNING EXPERIENCES	KEY INQUIRY QUESTIONS	LEARNING RESOURCES	ASSESSMENT METHOD
s, Elements and s	1.2 Physical and chemical changes	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Differentiate physical and chemical changes using observable evidence. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	What evidence shows that a new substance may have formed?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
s, Elements and s	1.2 Physical and chemical changes	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Investigate changes involving heating, cooling, mixing and reaction. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	What evidence shows that a new substance may have formed?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
s, Elements and s	1.2 Physical and chemical changes	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Identify indicators of chemical change and relate them to everyday contexts. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	What evidence shows that a new substance may have formed?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
s, Elements and s	1.2 Physical and chemical changes	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Explain conservation of matter qualitatively during changes. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	What evidence shows that a new substance may have formed?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
s, Elements and s	1.2 Physical and chemical changes	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Differentiate physical and chemical changes using observable evidence. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	What evidence shows that a new substance may have formed?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
s, Elements and s	1.2 Physical and chemical changes	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Investigate changes involving heating, cooling, mixing and reaction. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion. What evidence shows that a new substance may have formed?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
s, Elements and s	1.3 Classes of fire	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Identify common classes of fire and the materials involved. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How can we prevent fires and respond safely?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
s, Elements and s	1.3 Classes of fire	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Select appropriate safe responses and explain why water is unsuitable for some fires. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How can we prevent fires and respond safely?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
s, Elements and s	1.3 Classes of fire	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Demonstrate fire-prevention practices and emergency response procedures. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How can we prevent fires and respond safely?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
s, Elements and s	1.3 Classes of fire	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Interpret fire-safety symbols and evaluate risks in familiar settings. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How can we prevent fires and respond safely?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
s, Elements and s	1.3 Classes of fire	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Identify common classes of fire and the materials involved. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How can we prevent fires and respond safely?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.

Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.

TERM 2 — DETAILED LESSON SEQUENCE

Planned curriculum lessons: 54. Use the remaining allocated weekly periods for assessment, practical work, revision, feedback and remediation.

STRAND	SUB-STRAND	LESSON LEARNING OUTCOMES	LEARNING EXPERIENCES	KEY INQUIRY QUESTIONS	LEARNING RESOURCES	ASSESSMENT METHOD
s, Elements and s	1.3 Classes of fire	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Demonstrate fire-prevention practices and emergency response procedures. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How can we prevent fires and respond safely?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
s, Elements and s	1.3 Classes of fire	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Interpret fire-safety symbols and evaluate risks in familiar settings. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How can we prevent fires and respond safely?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Describe the cell as the basic structural and functional unit of living things. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Identify and describe functions of major cell structures. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Compare plant and animal cells using labelled diagrams and models. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Use a microscope or prepared images safely to observe cells. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Describe the cell as the basic structural and functional unit of living things. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Identify and describe functions of major cell structures. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.

How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Use a microscope or prepared images safely to observe cells. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.2 Movement of materials in and out of the cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Explain diffusion and osmosis using particle movement models. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do substances move into and out of cells?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.2 Movement of materials in and out of the cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Investigate movement of materials across selectively permeable membranes. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do substances move into and out of cells?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.2 Movement of materials in and out of the cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Relate movement of materials to cell survival and everyday examples. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do substances move into and out of cells?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.2 Movement of materials in and out of the cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Record observations and draw evidence-based conclusions. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do substances move into and out of cells?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.

Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.2 Movement of materials in and out of the cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Record observations and draw evidence-based conclusions. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do substances move into and out of cells?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.3 Reproduction in human beings	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Describe the major structures and functions of the human reproductive systems. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do human reproductive systems support growth and continuity of life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.3 Reproduction in human beings	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Explain puberty and the physical, emotional and social changes associated with it. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do human reproductive systems support growth and continuity of life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.3 Reproduction in human beings	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Describe fertilisation, pregnancy and responsible health practices using age-appropriate language. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do human reproductive systems support growth and continuity of life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.3 Reproduction in human beings	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Demonstrate respect, personal responsibility and help-seeking for health concerns. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do human reproductive systems support growth and continuity of life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.

TERM 3 — DETAILED LESSON SEQUENCE

Planned curriculum lessons: 38. Use the remaining allocated weekly periods for assessment, practical work, revision, feedback and remediation.

STRAND	SUB-STRAND	LESSON LEARNING OUTCOMES	LEARNING EXPERIENCES	KEY INQUIRY QUESTIONS	LEARNING RESOURCES	ASSESSMENT METHOD
nings and the t	2.3 Reproduction in human beings	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Describe the major structures and functions of the human reproductive systems. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do human reproductive systems support growth and continuity of life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.3 Reproduction in human beings	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Explain puberty and the physical, emotional and social changes associated with it. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do human reproductive systems support growth and continuity of life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nd Energy	3.1 Transformation of Energy	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Identify common forms of energy and describe transformations between them. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How is energy transformed in everyday systems?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nd Energy	3.1 Transformation of Energy	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Trace energy changes in familiar devices and natural processes. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How is energy transformed in everyday systems?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nd Energy	3.1 Transformation of Energy	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Investigate energy transformations and represent them using flow diagrams. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How is energy transformed in everyday systems?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nd Energy	3.1 Transformation of Energy	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Explain energy efficiency and responsible energy use. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How is energy transformed in everyday systems?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nd Energy	3.1 Transformation of Energy	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Identify common forms of energy and describe transformations between them. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion. How is energy transformed in everyday systems?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nd Energy	3.1 Transformation of Energy	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Trace energy changes in familiar devices and natural processes. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How is energy transformed in everyday systems?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nd Energy	3.1 Transformation of Energy	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Investigate energy transformations and represent them using flow diagrams. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion. CURRICULUM VALIDATION & TEACHER REVIEW

This is an original teacher-planning resource based on the KICD Grade 8 Integrated Science Curriculum Design (2024), not an official KICD publication. Confirm exact lesson-by-lesson content against the full curriculum design and the school's approved calendar before classroom use. The KICD design lists: Elements and Compounds (18); Physical and chemical changes (22); Classes of fire (20); The Cell (20); Movement of materials in and out of the cell (16); Reproduction in human beings (18); Transformation of Energy (20); Pressure (16). Total: 150 suggested lessons.
