TERM 2 — DETAILED LESSON SEQUENCE

Planned curriculum lessons: 54. Use the remaining allocated weekly periods for assessment, practical work, revision, feedback and remediation.

STRAND	SUB-STRAND	LESSON LEARNING OUTCOMES	LEARNING EXPERIENCES	KEY INQUIRY QUESTIONS	LEARNING RESOURCES	ASSESSMENT METHOD
s, Elements and s	1.3 Classes of fire	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Demonstrate fire-prevention practices and emergency response procedures. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How can we prevent fires and respond safely?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
s, Elements and s	1.3 Classes of fire	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Interpret fire-safety symbols and evaluate risks in familiar settings. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How can we prevent fires and respond safely?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Describe the cell as the basic structural and functional unit of living things. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Identify and describe functions of major cell structures. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Compare plant and animal cells using labelled diagrams and models. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Use a microscope or prepared images safely to observe cells. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Describe the cell as the basic structural and functional unit of living things. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Identify and describe functions of major cell structures. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.

STRAND	SUB-STRAND	LESSON LEARNING OUTCOMES	LEARNING EXPERIENCES	KEY INQUIRY QUESTIONS	LEARNING RESOURCES	ASSESSMENT METHOD
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Compare plant and animal cells using labelled diagrams and models. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Use a microscope or prepared images safely to observe cells. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Describe the cell as the basic structural and functional unit of living things. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Identify and describe functions of major cell structures. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Compare plant and animal cells using labelled diagrams and models. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Use a microscope or prepared images safely to observe cells. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Describe the cell as the basic structural and functional unit of living things. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Identify and describe functions of major cell structures. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
nings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Compare plant and animal cells using labelled diagrams and models. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.

STRAND	SUB-STRAND	LESSON LEARNING OUTCOMES	LEARNING EXPERIENCES	KEY INQUIRY QUESTIONS	LEARNING RESOURCES	ASSESSMENT METHOD
hings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Use a microscope or prepared images safely to observe cells. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Describe the cell as the basic structural and functional unit of living things. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Identify and describe functions of major cell structures. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Compare plant and animal cells using labelled diagrams and models. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.1 The Cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Use a microscope or prepared images safely to observe cells. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How does cell structure support life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.2 Movement of materials in and out of the cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Explain diffusion and osmosis using particle movement models. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do substances move into and out of cells?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.2 Movement of materials in and out of the cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Investigate movement of materials across selectively permeable membranes. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do substances move into and out of cells?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.2 Movement of materials in and out of the cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Relate movement of materials to cell survival and everyday examples. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do substances move into and out of cells?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.2 Movement of materials in and out of the cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Record observations and draw evidence-based conclusions. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do substances move into and out of cells?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.

STRAND	SUB-STRAND	LESSON LEARNING OUTCOMES	LEARNING EXPERIENCES	KEY INQUIRY QUESTIONS	LEARNING RESOURCES	ASSESSMENT METHOD
hings and the t	2.2 Movement of materials in and out of the cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Investigate movement of materials across selectively permeable membranes. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do substances move into and out of cells?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.2 Movement of materials in and out of the cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Relate movement of materials to cell survival and everyday examples. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do substances move into and out of cells?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.2 Movement of materials in and out of the cell	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Record observations and draw evidence-based conclusions. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do substances move into and out of cells?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.3 Reproduction in human beings	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Describe the major structures and functions of the human reproductive systems. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do human reproductive systems support growth and continuity of life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.3 Reproduction in human beings	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Explain puberty and the physical, emotional and social changes associated with it. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do human reproductive systems support growth and continuity of life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.3 Reproduction in human beings	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Describe fertilisation, pregnancy and responsible health practices using age-appropriate language. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do human reproductive systems support growth and continuity of life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.3 Reproduction in human beings	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Demonstrate respect, personal responsibility and help-seeking for health concerns. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do human reproductive systems support growth and continuity of life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.3 Reproduction in human beings	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Describe the major structures and functions of the human reproductive systems. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do human reproductive systems support growth and continuity of life?	KICD-approved learner's book; charts; models; locally available materials; worksheets; safe apparatus; digital media where available.	Oral questions; observation chec learner's work; practical/investiga record; written exercise; peer/self-assessment.
hings and the t	2.3 Reproduction in human beings	At the end of the lesson, the learner should be able to: 1. **Knowledge:** Explain puberty and the physical, emotional and social changes associated with it. 2. **Skills:** observe, investigate, represent or explain the concept using suitable evidence. 3. **Attitude:** demonstrate curiosity, safety, cooperation and responsibility.	The learner is guided to observe a stimulus; discuss prior ideas; work individually or collaboratively; investigate, model, classify, draw or solve a task; record findings; and present a conclusion.	How do human reproductive systems support growth and continuity of life?
