GRADE 8 AGRICULTURE – SCHEME OF WORK

School: _____ Teacher: _____ TSC No.: _____

Grade: 8 Year: 2027 Term 1 Lessons per week: 4

Curriculum basis: KICD Grade 8 Agriculture Curriculum Design, Revised 2024. The design allocates 120 suggested lessons across four strands and thirteen sub-strands. This scheme uses a proposed 40-lessons-per-term distribution; KICD notes that suggested sub-strand lesson numbers may be adjusted to the learning context.

Learning outcomes are presented in Knowledge, Skills and Attitudes for planning. The lesson focuses and learning experiences are organised from the KICD sub-strand content and suggested experiences; consult the official design for full assessment rubrics, core competencies, values, PCIs and links to other learning areas.

WK	LSN	STRAND	SUB-STRAND / LESSON FOCUS	LESSON LEARNING OUTCOMES	LEARNING EXPERIENCES	KEY INQUIRY QUESTIONS	LEARNING RESOURCES	ASSESSMENT METHODS	REFLECTION
	1	1.0 Conservation of Resources	1.1 Soil Conservation Measures **Focus:** Meaning and importance of soil conservation	At the end of the lesson, the learner should be able to: Knowledge: Describe methods of soil conservation in an agricultural environment. Skills: Carry out soil conservation activities in the environment. Attitudes: Demonstrate a caring attitude towards soil in the environment.	In groups, learners are guided to: search for information on soil conservation methods using print and digital resources; observe the school or local environment to identify signs and causes of soil erosion; and present findings on the suitability of different methods in the local environment. They then focus on meaning and importance of soil conservation and share their findings.	How can we conserve soil in the agricultural environment?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	2	1.0 Conservation of Resources	1.1 Soil Conservation Measures **Focus:** Causes of soil erosion	At the end of the lesson, the learner should be able to: Knowledge: Describe methods of soil conservation in an agricultural environment. Skills: Carry out soil conservation activities in the environment. Attitudes: Demonstrate a caring attitude towards soil in the environment.	In groups, learners are guided to: search for information on soil conservation methods using print and digital resources; observe the school or local environment to identify signs and causes of soil erosion; and present findings on the suitability of different methods in the local environment. They then focus on causes of soil erosion and share their findings.	How can we conserve soil in the agricultural environment?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	3	1.0 Conservation of Resources	1.1 Soil Conservation Measures **Focus:** Effects of soil erosion on agricultural land	At the end of the lesson, the learner should be able to: Knowledge: Describe methods of soil conservation in an agricultural environment. Skills: Carry out soil conservation activities in the environment. Attitudes: Demonstrate a caring attitude towards soil in the environment.	In groups, learners are guided to: search for information on soil conservation methods using print and digital resources; observe the school or local environment to identify signs and causes of soil erosion; and present findings on the suitability of different methods in the local environment. They then focus on effects of soil erosion on agricultural land and share their findings.	How can we conserve soil in the agricultural environment?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	4	1.0 Conservation of Resources	1.1 Soil Conservation Measures **Focus:** Physical soil conservation measures	At the end of the lesson, the learner should be able to: Knowledge: Describe methods of soil conservation in an agricultural environment. Skills: Carry out soil conservation activities in the environment. Attitudes: Demonstrate a caring attitude towards soil in the environment.	In groups, learners are guided to: search for information on soil conservation methods using print and digital resources; observe the school or local environment to identify signs and causes of soil erosion; and present findings on the suitability of different methods in the local environment. They then focus on physical soil conservation measures and share their findings.	How can we conserve soil in the agricultural environment?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	1	1.0 Conservation of Resources	1.1 Soil Conservation Measures **Focus:** Biological soil conservation measures	At the end of the lesson, the learner should be able to: Knowledge: Describe methods of soil conservation in an agricultural environment. Skills: Carry out soil conservation activities in the environment. Attitudes: Demonstrate a caring attitude towards soil in the environment.	In groups, learners are guided to: search for information on soil conservation methods using print and digital resources; observe the school or local environment to identify signs and causes of soil erosion; and present findings on the suitability of different methods in the local environment. They then focus on biological soil conservation measures and share their findings.	How can we conserve soil in the agricultural environment?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	2	1.0 Conservation of Resources	1.1 Soil Conservation Measures **Focus:** Contour farming and terracing	At the end of the lesson, the learner should be able to: Knowledge: Describe methods of soil conservation in an agricultural environment. Skills: Carry out soil conservation activities in the environment. Attitudes: Demonstrate a caring attitude towards soil in the environment.	In groups, learners are guided to: search for information on soil conservation methods using print and digital resources; observe the school or local environment to identify signs and causes of soil erosion; and present findings on the suitability of different methods in the local environment. They then focus on contour farming and terracing and share their findings.	How can we conserve soil in the agricultural environment?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	3	1.0 Conservation of Resources	1.1 Soil Conservation Measures **Focus:** Mulching and cover crops	At the end of the lesson, the learner should be able to: Knowledge: Describe methods of soil conservation in an agricultural environment. Skills: Carry out soil conservation activities in the environment. Attitudes: Demonstrate a caring attitude towards soil in the environment.	In groups, learners are guided to: search for information on soil conservation methods using print and digital resources; observe the school or local environment to identify signs and causes of soil erosion; and present findings on the suitability of different methods in the local environment. They then focus on mulching and cover crops and share their findings.	How can we conserve soil in the agricultural environment?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____

WK	LSN	STRAND	SUB-STRAND / LESSON FOCUS	LESSON LEARNING OUTCOMES	LEARNING EXPERIENCES	KEY INQUIRY QUESTIONS	LEARNING RESOURCES	ASSESSMENT METHODS	REFLECTION
	4	1.0 Conservation of Resources	1.1 Soil Conservation Measures **Focus:** Grass strips and windbreaks	At the end of the lesson, the learner should be able to: Knowledge: Describe methods of soil conservation in an agricultural environment. Skills: Carry out soil conservation activities in the environment. Attitudes: Demonstrate a caring attitude towards soil in the environment.	In groups, learners are guided to: search for information on soil conservation methods using print and digital resources; observe the school or local environment to identify signs and causes of soil erosion; and present findings on the suitability of different methods in the local environment. They then focus on grass strips and windbreaks and share their findings.	How can we conserve soil in the agricultural environment?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	1	1.0 Conservation of Resources	1.1 Soil Conservation Measures **Focus:** Selecting suitable measures for local conditions	At the end of the lesson, the learner should be able to: Knowledge: Describe methods of soil conservation in an agricultural environment. Skills: Carry out soil conservation activities in the environment. Attitudes: Demonstrate a caring attitude towards soil in the environment.	In groups, learners are guided to: search for information on soil conservation methods using print and digital resources; observe the school or local environment to identify signs and causes of soil erosion; and present findings on the suitability of different methods in the local environment. They then focus on selecting suitable measures for local conditions and share their findings.	How can we conserve soil in the agricultural environment?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	2	1.0 Conservation of Resources	1.1 Soil Conservation Measures **Focus:** Carrying out a soil conservation activity	At the end of the lesson, the learner should be able to: Knowledge: Describe methods of soil conservation in an agricultural environment. Skills: Carry out soil conservation activities in the environment. Attitudes: Demonstrate a caring attitude towards soil in the environment.	In groups, learners are guided to: search for information on soil conservation methods using print and digital resources; observe the school or local environment to identify signs and causes of soil erosion; and present findings on the suitability of different methods in the local environment. They then focus on carrying out a soil conservation activity and share their findings.	How can we conserve soil in the agricultural environment?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	3	1.0 Conservation of Resources	1.2 Water Harvesting and Storage **Focus:** Importance of harvesting and storing water	At the end of the lesson, the learner should be able to: Knowledge: Discuss ways of storing harvested water for domestic use. Skills: Take part in harvesting and storing water in the school for domestic use. Attitudes: Show responsibility in harvesting and storing water for domestic use.	In groups, learners are guided to: search and share information in groups on shallow water pans, water ponds and suitable water containers; identify opportunities for harvesting rainwater and surface run-off in the school; and make class presentations on initiatives and maintenance practices. They then focus on importance of harvesting and storing water and share their findings.	How can we harvest and store water for domestic purposes?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	4	1.0 Conservation of Resources	1.2 Water Harvesting and Storage **Focus:** Sources of rainwater and surface run-off	At the end of the lesson, the learner should be able to: Knowledge: Discuss ways of storing harvested water for domestic use. Skills: Take part in harvesting and storing water in the school for domestic use. Attitudes: Show responsibility in harvesting and storing water for domestic use.	In groups, learners are guided to: search and share information in groups on shallow water pans, water ponds and suitable water containers; identify opportunities for harvesting rainwater and surface run-off in the school; and make class presentations on initiatives and maintenance practices. They then focus on sources of rainwater and surface run-off and share their findings.	How can we harvest and store water for domestic purposes?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	1	1.0 Conservation of Resources	1.2 Water Harvesting and Storage **Focus:** Shallow water pans	At the end of the lesson, the learner should be able to: Knowledge: Discuss ways of storing harvested water for domestic use. Skills: Take part in harvesting and storing water in the school for domestic use. Attitudes: Show responsibility in harvesting and storing water for domestic use.	In groups, learners are guided to: search and share information in groups on shallow water pans, water ponds and suitable water containers; identify opportunities for harvesting rainwater and surface run-off in the school; and make class presentations on initiatives and maintenance practices. They then focus on shallow water pans and share their findings.	How can we harvest and store water for domestic purposes?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	2	1.0 Conservation of Resources	1.2 Water Harvesting and Storage **Focus:** Water ponds	At the end of the lesson, the learner should be able to: Knowledge: Discuss ways of storing harvested water for domestic use. Skills: Take part in harvesting and storing water in the school for domestic use. Attitudes: Show responsibility in harvesting and storing water for domestic use.	In groups, learners are guided to: search and share information in groups on shallow water pans, water ponds and suitable water containers; identify opportunities for harvesting rainwater and surface run-off in the school; and make class presentations on initiatives and maintenance practices. They then focus on water ponds and share their findings.	How can we harvest and store water for domestic purposes?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	3	1.0 Conservation of Resources	1.2 Water Harvesting and Storage **Focus:** Suitable water containers	At the end of the lesson, the learner should be able to: Knowledge: Discuss ways of storing harvested water for domestic use. Skills: Take part in harvesting and storing water in the school for domestic use. Attitudes: Show responsibility in harvesting and storing water for domestic use.	In groups, learners are guided to: search and share information in groups on shallow water pans, water ponds and suitable water containers; identify opportunities for harvesting rainwater and surface run-off in the school; and make class presentations on initiatives and maintenance practices. They then focus on suitable water containers and share their findings.	How can we harvest and store water for domestic purposes?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	4	1.0 Conservation of Resources	1.2 Water Harvesting and Storage **Focus:** Selecting safe storage methods	At the end of the lesson, the learner should be able to: Knowledge: Discuss ways of storing harvested water for domestic use. Skills: Take part in harvesting and storing water in the school for domestic use. Attitudes: Show responsibility in harvesting and storing water for domestic use.	In groups, learners are guided to: search and share information in groups on shallow water pans, water ponds and suitable water containers; identify opportunities for harvesting rainwater and surface run-off in the school; and make class presentations on initiatives and maintenance practices. They then focus on selecting safe storage methods and share their findings.	How can we harvest and store water for domestic purposes?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____

	1	1.0 Conservation of Resources	1.2 Water Harvesting and Storage **Focus:** Initiating water harvesting in school	At the end of the lesson, the learner should be able to: Knowledge: Discuss ways of storing harvested water for domestic use. Skills: Take part in harvesting and storing water in the school for domestic use. Attitudes: Show responsibility in harvesting and storing water for domestic use.	In groups, learners are guided to: search and share information in groups on shallow water pans, water ponds and suitable water containers; identify opportunities for harvesting rainwater and surface run-off in the school; and make class presentations on initiatives and maintenance practices. They then focus on initiating water harvesting in school and share their findings.	How can we harvest and store water for domestic purposes?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	2	1.0 Conservation of Resources	1.2 Water Harvesting and Storage **Focus:** Maintaining water harvesting and storage facilities	At the end of the lesson, the learner should be able to: Knowledge: Discuss ways of storing harvested water for domestic use. Skills: Take part in harvesting and storing water in the school for domestic use. Attitudes: Show responsibility in harvesting and storing water for domestic use.	In groups, learners are guided to: search and share information in groups on shallow water pans, water ponds and suitable water containers; identify opportunities for harvesting rainwater and surface run-off in the school; and make class presentations on initiatives and maintenance practices. They then focus on maintaining water harvesting and storage facilities and share their findings.	How can we harvest and store water for domestic purposes?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	3	1.0 Conservation of Resources	1.2 Water Harvesting and Storage **Focus:** Presenting a school water harvesting initiative	At the end of the lesson, the learner should be able to: Knowledge: Discuss ways of storing harvested water for domestic use. Skills: Take part in harvesting and storing water in the school for domestic use. Attitudes: Show responsibility in harvesting and storing water for domestic use.	In groups, learners are guided to: search and share information in groups on shallow water pans, water ponds and suitable water containers; identify opportunities for harvesting rainwater and surface run-off in the school; and make class presentations on initiatives and maintenance practices. They then focus on presenting a school water harvesting initiative and share their findings.	How can we harvest and store water for domestic purposes?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	4	2.0 Food Production Processes	2.1 Kitchen and Backyard Gardening **Focus:** Roles of kitchen and backyard gardens in food production	At the end of the lesson, the learner should be able to: Knowledge: Explain the role of kitchen and backyard gardens in food production. Skills: Establish a kitchen and backyard garden for food production. Attitudes: Adopt the use of kitchen and backyard gardens for food production.	In groups, learners are guided to: use digital and print resources to search for roles of kitchen and backyard gardens, including fresh healthy foods, saving money and readily accessible food; prepare a kitchen or backyard garden and plant vegetables, herbs and spices; and take care of crops established in the garden and discuss their use in food production. They then focus on roles of kitchen and backyard gardens in food production and share their findings.	How does a kitchen garden contribute to food production?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	1	2.0 Food Production Processes	2.1 Kitchen and Backyard Gardening **Focus:** Benefits of fresh and readily accessible foods	At the end of the lesson, the learner should be able to: Knowledge: Explain the role of kitchen and backyard gardens in food production. Skills: Establish a kitchen and backyard garden for food production. Attitudes: Adopt the use of kitchen and backyard gardens for food production.	In groups, learners are guided to: use digital and print resources to search for roles of kitchen and backyard gardens, including fresh healthy foods, saving money and readily accessible food; prepare a kitchen or backyard garden and plant vegetables, herbs and spices; and take care of crops established in the garden and discuss their use in food production. They then focus on benefits of fresh and readily accessible foods and share their findings.	How does a kitchen garden contribute to food production?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	2	2.0 Food Production Processes	2.1 Kitchen and Backyard Gardening **Focus:** Planning a kitchen or backyard garden	At the end of the lesson, the learner should be able to: Knowledge: Explain the role of kitchen and backyard gardens in food production. Skills: Establish a kitchen and backyard garden for food production. Attitudes: Adopt the use of kitchen and backyard gardens for food production.	In groups, learners are guided to: use digital and print resources to search for roles of kitchen and backyard gardens, including fresh healthy foods, saving money and readily accessible food; prepare a kitchen or backyard garden and plant vegetables, herbs and spices; and take care of crops established in the garden and discuss their use in food production. They then focus on planning a kitchen or backyard garden and share their findings.	How does a kitchen garden contribute to food production?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	3	2.0 Food Production Processes	2.1 Kitchen and Backyard Gardening **Focus:** Selecting vegetables, herbs and spices	At the end of the lesson, the learner should be able to: Knowledge: Explain the role of kitchen and backyard gardens in food production. Skills: Establish a kitchen and backyard garden for food production. Attitudes: Adopt the use of kitchen and backyard gardens for food production.	In groups, learners are guided to: use digital and print resources to search for roles of kitchen and backyard gardens, including fresh healthy foods, saving money and readily accessible food; prepare a kitchen or backyard garden and plant vegetables, herbs and spices; and take care of crops established in the garden and discuss their use in food production. They then focus on selecting vegetables, herbs and spices and share their findings.	How does a kitchen garden contribute to food production?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	4	2.0 Food Production Processes	2.1 Kitchen and Backyard Gardening **Focus:** Preparing a garden site	At the end of the lesson, the learner should be able to: Knowledge: Explain the role of kitchen and backyard gardens in food production. Skills: Establish a kitchen and backyard garden for food production. Attitudes: Adopt the use of kitchen and backyard gardens for food production.	In groups, learners are guided to: use digital and print resources to search for roles of kitchen and backyard gardens, including fresh healthy foods, saving money and readily accessible food; prepare a kitchen or backyard garden and plant vegetables, herbs and spices; and take care of crops established in the garden and discuss their use in food production. They then focus on preparing a garden site and share their findings.	How does a kitchen garden contribute to food production? Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	3	2.0 Food Production Processes	2.1 Kitchen and Backyard Gardening **Focus:** Maintaining a kitchen or backyard garden	At the end of the lesson, the learner should be able to: Knowledge: Explain the role of kitchen and backyard gardens in food production. Skills: Establish a kitchen and backyard garden for food production. Attitudes: Adopt the use of kitchen and backyard gardens for food production.	In groups, learners are guided to: use digital and print resources to search for roles of kitchen and backyard gardens, including fresh healthy foods, saving money and readily accessible food; prepare a kitchen or backyard garden and plant vegetables, herbs and spices; and take care of crops established in the garden and discuss their use in food production. They then focus on maintaining a kitchen or backyard garden and share their findings.	How does a kitchen garden contribute to food production?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	4	2.0 Food Production Processes	2.1 Kitchen and Backyard Gardening **Focus:** Harvesting and using garden produce	At the end of the lesson, the learner should be able to: Knowledge: Explain the role of kitchen and backyard gardens in food production. Skills: Establish a kitchen and backyard garden for food production. Attitudes: Adopt the use of kitchen and backyard gardens for food production.	In groups, learners are guided to: use digital and print resources to search for roles of kitchen and backyard gardens, including fresh healthy foods, saving money and readily accessible food; prepare a kitchen or backyard garden and plant vegetables, herbs and spices; and take care of crops established in the garden and discuss their use in food production. They then focus on harvesting and using garden produce and share their findings.	How does a kitchen garden contribute to food production?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	1	2.0 Food Production Processes	2.2 Poultry Rearing in a Fold **Focus:** Meaning and features of a poultry fold	At the end of the lesson, the learner should be able to: Knowledge: Describe a fold in poultry rearing. Skills: Construct a fold for rearing poultry. Attitudes: Show responsibility in rearing poultry.	In groups, learners are guided to: search and observe video clips or images of poultry folds and share observations; use locally available reused and recycled wire, plastic and wood materials to construct a fold; and practise moving the fold, feeding, watering, sanitation and protection from predators and harsh weather. They then focus on meaning and features of a poultry fold and share their findings.	How can we rear poultry in a fold for food production?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	2	2.0 Food Production Processes	2.2 Poultry Rearing in a Fold **Focus:** Types and examples of poultry folds	At the end of the lesson, the learner should be able to: Knowledge: Describe a fold in poultry rearing. Skills: Construct a fold for rearing poultry. Attitudes: Show responsibility in rearing poultry.	In groups, learners are guided to: search and observe video clips or images of poultry folds and share observations; use locally available reused and recycled wire, plastic and wood materials to construct a fold; and practise moving the fold, feeding, watering, sanitation and protection from predators and harsh weather. They then focus on types and examples of poultry folds and share their findings.	How can we rear poultry in a fold for food production?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	3	2.0 Food Production Processes	2.2 Poultry Rearing in a Fold **Focus:** Materials for constructing a poultry fold	At the end of the lesson, the learner should be able to: Knowledge: Describe a fold in poultry rearing. Skills: Construct a fold for rearing poultry. Attitudes: Show responsibility in rearing poultry.	In groups, learners are guided to: search and observe video clips or images of poultry folds and share observations; use locally available reused and recycled wire, plastic and wood materials to construct a fold; and practise moving the fold, feeding, watering, sanitation and protection from predators and harsh weather. They then focus on materials for constructing a poultry fold and share their findings.	How can we rear poultry in a fold for food production?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	4	2.0 Food Production Processes	2.2 Poultry Rearing in a Fold **Focus:** Planning and sketching a poultry fold	At the end of the lesson, the learner should be able to: Knowledge: Describe a fold in poultry rearing. Skills: Construct a fold for rearing poultry. Attitudes: Show responsibility in rearing poultry.	In groups, learners are guided to: search and observe video clips or images of poultry folds and share observations; use locally available reused and recycled wire, plastic and wood materials to construct a fold; and practise moving the fold, feeding, watering, sanitation and protection from predators and harsh weather. They then focus on planning and sketching a poultry fold and share their findings.	How can we rear poultry in a fold for food production?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____

	1	2.0 Food Production Processes	2.2 Poultry Rearing in a Fold **Focus:** Measuring and preparing materials	At the end of the lesson, the learner should be able to: Knowledge: Describe a fold in poultry rearing. Skills: Construct a fold for rearing poultry. Attitudes: Show responsibility in rearing poultry.	In groups, learners are guided to: search and observe video clips or images of poultry folds and share observations; use locally available reused and recycled wire, plastic and wood materials to construct a fold; and practise moving the fold, feeding, watering, sanitation and protection from predators and harsh weather. They then focus on measuring and preparing materials and share their findings.	How can we rear poultry in a fold for food production?	KICD-approved Agriculture learner's materials; locally available materials; relevant tools and equipment; pictures, charts and models; print and digital resources; school garden or demonstration area where available.	Oral questions; observation checklist; practical task; learner presentation; written exercise; peer/self-assessment; project record; rubric.	_____
	2	2.0 Food Production Processes	2.2 Poultry Rearing in a Fold **Focus:** Constructing the fold	At the end of the lesson, the learner should be able to: Knowledge: Describe a fold in poultry rearing. Skills: Construct a fold for rearing poultry. Attitudes: Show responsibility in rearing poultry.	In groups, learners are guided to: search and observe video clips or images of poultry folds and share observations; use locally available reused and recycled wire, plastic and wood materials to construct a fold; and practise moving the fold, feeding, watering, sanitation and protection from predators and harsh weather. They then focus on constructing the fold and share their findings.	How can we rear poultry in a fold for food production? 0	4	2.0 Food Production Processes	2.3 Crop Pest and Disease Control **Focus:** Common pests affecting vegetable crops	At the end of the lesson, the learner should be able to: Knowledge: Identify vegetable crops attacked by pests and diseases. Skills: Control pests and diseases on vegetable crops. Attitudes: Acknowledge the importance of controlling pests and diseases in vegetable production.	In groups, learners are guided to: take a field excursion to observe vegetable crops attacked by pests and identify signs and pest locations; visit a vegetable garden to observe disease symptoms such as wilting, black and brown spots and rotting; and discuss and present the importance of pest and disease control. They then focus on common pests affecting vegetable crops and share their findings.	How can we identify and control pests and diseases affecting vegetable crops?
